Threat Rating New with Cisco IPS Sensor Software Version 6.0, the Threat Rating feature provides a single view of the threat environment of the network. Threat Rating can minimize alarms and events through the ability to customize the viewer to only show events with a high Threat Rating value. The Threat Rating value is derived as follows:

Dynamic adjustment of event Risk Rating based on success of response action

If response action was applied, Risk Rating is deprecated (TR < RR)

If response action was not applied, Risk Rating remains unchanged (TR = RR)

The result is a single value by which the threat risk is determined. This eases the management of alarms and determination of risk on the network.
