### **NEW QUESTION: 1**

- A. Option C
- B. Option B
- C. Option A
- D. Option D

**Answer: C**

### **NEW QUESTION: 2**

- A. show ip ospf link-state
- B. show ip ospf database
- C. show ip ospf neighbors
- D. show ip ospf lsa database

**Answer: B**

Explanation:

The "show ip ospf database" command displays the link states. Here is an example:

Here is the lsa database on R2.

```
R2#show ip ospf database

### NEW QUESTION: 3

You work as a Network Administrator for Infonet Inc. The company uses Wired Equivalent Privacy (WEP) for wireless security. Who among the following can authenticate from the access point of the network?

- A. Only users with the correct WEP key.
- B. Only the administrator.
- C. Anyone can authenticate.
- D. Only users within the company.

**Answer: A**

Explanation:

Only users with the correct WEP key can authenticate from the access point of the network.

What is WEP? Wired Equivalent Privacy (WEP) is a security protocol for wireless local area networks (WLANs). It has two components, authentication and encryption. It provides security, which is equivalent to wired networks, for wireless networks. WEP encrypts data on a wireless network by using a fixed secret key. WEP incorporates a checksum in each frame to provide protection against the attacks that attempt to reveal the key stream.
