### NEW QUESTION: 1

A mediation flow had been deployed that contains several Event Emitter primitives to emit CEI events that will be used for audit tracking purposes. Currently, each of the CEI events emitted contains a copy of the entire message. During testing of the application, the systems administrator reported back that the server is performing poorly. The systems administrator has determined that the problem is caused by the size of the CEI events generated by the mediation flow. What could the developer do in this situation to improve performance?

- A. Use a Message Filter primitive to filter out the message body before it reaches the Event Emitter primitives.
- B. Change the transaction mode to 'New' to increase CEI performance.
- C. Change the Root property of the Event Emitter primitives.
- D. Promote the Enabled property of each Event Emitter primitive and set it to unchecked.
