#### **NEW QUESTION: 1**

An administrator needs to protect new resources added to a server in the future and ensure they will be automatically included in the backup jobs.

How should the administrator achieve dynamic inclusion?

- A. check the job configuration for manual inclusions/exclusions
- B. enable the option to Discover Data to Back Up in Backup Exec Settings
- C. check the job option for dynamic inclusion
- D. check the box next to the server name in the backup selections

**Answer: D**

#### **NEW QUESTION: 2**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft SQL server that has Data Quality Services (DQS) installed.

You need to review the completeness and the uniqueness of the data stored in the matching policy.

Solution: You create a matching rule.

Does this meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

Explanation

Use a matching rule, and use completeness and uniqueness data to determine what weight to give a field in the matching process.

If there is a high level of uniqueness in a field, using the field in a matching policy can decrease the matching results, so you may want to set the weight for that field to a relatively small value. If you have a low level of uniqueness for a column, but low completeness, you may not want to include a domain for that column.
