In fact, there are no absolutely right S1000-002 exam questions for you;

NEW QUESTION: 1
Your network contains 20 servers that run Windows Server 2008 R2 and 800 client computers that run Windows 7 Enterprise. The network contains a server named Server1 that has the Key Management Service (KMS) installed. You discover that the Windows 7 client computers are not added to the current count on the KMS host. You need to ensure that all client computers are added to the KMS current count on Server1. What should you do?
A. On each client computer, run slmgr.vbs /ato.
B. On Server1, run slmgr.vbs /rearm.
C. On Server1, run slmgr.vbs /ato.
D. On each client computer, run slmgr.vbs /rearm.
Answer: D
Explanation:
Clients are not adding to the KMS count:
You need to run sysprep /generalize or slmgr.vbs /rearm to reset the client computer ID (CMID) and other product activation information. Otherwise, each client computer looks identical and the KMS host does not count them as separate KMS clients.
